SUMMARY

B.Tech Computer Science graduate (CGPA 8.7) and Cyber MDR Analyst at KPMG Global Services, with experience across security operations, software development, and applied machine learning. IEEE-published researcher in efficient deep learning and ML robustness. Builds across the full stack and in security-operations tooling, and is seeking technical roles spanning software engineering, cybersecurity, and AI/ML.

EDUCATION

Program	Institution	GPA / Percentage	Completion
B.Tech (Computer Science &. Engg.)	Jain University	8.7	2026
Class XII	Base P U College	84.6%	2022
Class X	Sri Vani Education Centre	90.8%	2020

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL

Cybersecurity & SecOps: SIEM (Splunk), threat-intelligence tools, email-header analysis, alert triage & incident response, CASB / cloud security controls, Wazuh, OpenSearch

Software & Web: React.js, Node.js, Express.js, MongoDB, PostgreSQL, REST APIs, Git/GitHub

AI/ML & Data: Deep learning (PyTorch), knowledge distillation, anomaly detection, feature engineering, data analysis

Cloud & Tools: Microsoft Azure & AWS (certification prep), VS Code, Postman

EXPERIENCE

KPMG Global Services (Advisory) — Cyber MDR Analyst

Jul 2026 – Present

Analyst, Cyber - Managed Detection & Response (MDR) [*Apprenticeship*]

Jan 2026 – Jun 2026

- Completed KPMG's structured SOC training covering security-operations fundamentals, threat-intelligence tools, email-header analysis, and SIEM (Splunk).
- Worked within a squad on a Cloud Access Security Broker (CASB) implementation, building familiarity with cloud security controls and enterprise security architecture.
- Strengthened core networking and security-operations knowledge through hands-on exercises and mentorship within the MDR practice.

PROJECTS

Progressive Token Pruning with Feature-Aware Knowledge Distillation (PTP-FAKD) *IEEE IECCT 2026*

- Designed a method to make Vision Transformers more efficient by combining progressive token pruning with feature-aware knowledge distillation, reducing inference cost while preserving accuracy.
- First-author paper (ID 1523) accepted, presented, and published; managed the full camera-ready, copyright, registration, and conference-presentation workflow end to end.

AI-Driven SOC Simulation Platform — Python, React, Node.js, LLM

github.com/Omrvu/ai-soc-platform

- Built an end-to-end security-operations platform integrating Wazuh, TheHive, and OpenSearch with a React/Node.js dashboard for real-time alert visualization and case management.
- Added a Groq LLaMA layer to automatically summarize and contextualize alerts and accelerate analyst triage; shipped with live demo access via ngrok.

Telemetry Corruption Robustness Study (Formula 1 / FastF1) — Python, ML

- Demonstrated that models with strong clean-data performance can fail under structured sensor-telemetry corruption, comparing failure behavior across four model architectures.
- Engineered the full data and experimentation pipeline from scratch using real Formula 1 telemetry (FastF1 API) and systematic corruption scenarios.

PUBLICATIONS

PTP-FAKD for Efficient Vision Transformers — IEEE IECCT 2026. DOI: [10.1109/IECCT68664.2026.11541604](https://doi.org/10.1109/IECCT68664.2026.11541604)

Soil Nutrient Analysis in Agricultural Crops — IEEE CISCT 2023. DOI: [10.1109/CISCT57197.2023.10351370](https://doi.org/10.1109/CISCT57197.2023.10351370).

Reviewed ML algorithms (Naïve Bayes, J48, JRip) for soil-nutrient prediction.
